Art Unit: 2826

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a semiconductor device, classified in class 257, subclass 288.
- II. Claims 2-21, drawn to a method of making a semiconductor device, classified in class 438, subclass 129

The inventions are distinct, each from the other because:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process wherein rather than depositing an insulation and removing external insulation, selective deposition is employed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Should applicant elect the process claims group II above, the following is applicable. This application contains claims directed to the following patentably distinct species of the claimed invention:

1) The claimed species in claims 2-15 including an element forming region and a dummy region.

2) The species of the claimed invention in claims 16-21 regarding a method of designing a semiconductor device as in claims 16-21 including from a dummy region having at least two dummy pattern groups, a plurality of patterns of same shape and same size comprising placing a plurality of patterns of each dummy pattern group after the element forming region and the dummy region are specified with the boundary.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 2826

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
